

D2S>AMP Adapters

Products Used:

D2S/AMP ballast adapters

Shown with Morimoto 5Five "D2S" output ballast and H1 HID bulb

Directions:

- 1) Plug the male & female output on the D2S/AMP adapter into the corresponding male/female inputs on your rebased HID bulb.
- 2) Twist the black D2S socket into the D2S output from your ballast as if it were a light bulb. Make sure the tabs are locked in. A bit of dielectric grease around this assembly is a good idea to ensure weather-resistance against moisture.
