How-to: Lexus RX-AFS Projector with TSX-R Lens Swap

The Lexus RX-AFS Projector has 3 main components, a paper spacer ring (1), the OEM lens (not pictured) and, the lens holder (4). To swap the OEM lens for the TSX-R please follow these steps:

1. Remove the 2 screws that attach the lens holder (4) to the projector.
2. Remove the OEM lens but leave the paper spacer (1) in place.
3. Place the TSX-R lens (2) into the projector on top of the paper spacer.
NOTE: the small ridges on the surface of the TSX-R lens should align with the bottom of the projector.
4. Place the metal spacer ring (3) in over the TSX-R lens.
5. Replace the lens holder (4) and make sure that it is screwed down tightly.
